

In the claims:

Please amend claims 1-25 as follows:

1. (currently amended) A system of tracking individuals divided into one or more flocks ~~, wherein comprising:~~ at least one individual flock leader in each flock ~~, from now on called flock leader,~~ being provided with a first electronic device ~~(1)~~ including a position tracker ~~(2)~~ and radio communication equipment, ~~characterized in that~~ the radio communication equipment includes at least a first transceiver ~~(3)~~ operating in a public radio communication network, and a second transceiver ~~(4)~~ operating in a short distance radio system, at least one other individual belonging to a flock being provided with the second electronic device ~~(6)~~, said second electronic device ~~(6)~~ including at least a third transceiver ~~(7)~~ also operating in the short distance radio system and being arranged to communicate with the second transceiver ~~(4)~~ of said radio communication equipment, each second electronic device being arranged to transmit at least an identification code uniquely identifying said second device to a first electronic device present in the flock through the short distance radio system, thereby indicating the presence of the associated individual in a flock.

2. (currently amended) A system as claimed in claim 1 ~~, characterized in further comprising~~ a system controller arranged to communicate with the flock leader(s) of each flock through the public radio communication network managing the system and storing system information and information regarding all registered individuals of the system including at least the identity of each individual, to which flock each individual currently belongs, an indication of which individuals being the flock leader(s) of each flock and a public radio communication network address of all the flock leader(s) of the system.

3. (currently amended) A system as claimed in claim 1 ~~or 2,~~  
~~characterized in that wherein~~ the transmission of at least an  
identification code uniquely identifying the respective  
individuals to the flock leader(s) of the flock is  
accomplished periodically.

4. (currently amended) A system as claimed in claim 1 ~~, 2~~  
~~or 3, characterized in that wherein~~ the first electronic device  
also includes a memory and a processor for storing at least  
the identities of the individuals currently associated with  
the corresponding flock.

5. (currently amended) A system as claimed in ~~any of the~~  
~~preceding claims, characterized in that claim 1 wherein~~ each  
electronic device is provided with sensors sensing data  
regarding the condition of each individual.

6. (currently amended) A system as claimed in claim 5,  
~~characterized in that 4 wherein~~ the data is transmitted from  
the individuals to the associated flock leader together with  
the identification code and stored in the memory of the  
respective first electronic device.

7. (currently amended) A system as claimed in ~~one of the~~  
~~claims 2 - 6, characterized in that claim 2 wherein~~ the system  
controller includes an application interface allowing a third  
party or a user of the system to fetch data regarding the  
individuals.

8. (currently amended) A system as claimed in ~~one of the~~  
~~claims 2 - 7, characterized in that claim 2 wherein~~ when an  
individual roams from a first flock to a second flock, the  
system controller is updated so that the information regarding  
the flock belonging of the individual is changed from the  
first flock to the second flock.

9. (currently amended) A system as claimed in ~~one of the claims 2 -- 8, characterized in that~~ claim 2 wherein an alarm is activated for an individual when a predefined time period since last reception of data from the individual to the flock leader of the individual's associated flock has elapsed and no other flock leader of the system has received data from the individual within the same time period.

10. (currently amended) A system as claimed in claim 9 ~~, characterized in that~~ wherein the alarm initiates sending of an e-mail or a short message to a person responsible for the individual for which the alarm is activated.

11. (currently amended) A system as claimed in ~~any of the preceding claims, characterized in that~~ claim 1 wherein the public radio communication network is a GSM, GPRS, UMTS or WLAN network and the public radio communication network address is a telephone number or an IP address.

12. (currently amended) A system as claimed in ~~any of the preceding claims, characterized in that~~ claim 1 wherein the position tracker is a GPS receiver.

13. (currently amended) A system as claimed in ~~any of the preceding claims, characterized in that~~ claim 1 wherein the position tracker obtains its information from the public radio communication network.

14. (currently amended) A system as claimed in ~~any of the preceding claims, characterized in that~~ claim 1 wherein the short distance radio system is a Bluetooth® system or a system operating in the ISM frequency bands or other open frequency bands like 433mHz.

15. (currently amended) A system as claimed in ~~any of the preceding claims, characterized in that~~ claim 1 wherein the individuals are animals.

16. (currently amended) A system as claimed in claim 15[[,]]  
~~characterized in that~~ wherein the second electronic device is  
formed as a collar or a light-weight earmark attached to a  
respective ear of each animal.

17. (currently amended) A system as claimed in ~~any of the~~  
~~preceding claims, characterized in that~~ claim 1 wherein first  
electronic devices act as mobile base stations in a dynamic  
piconet structure of moving coverage areas limited by the  
coverage areas of the second transceivers of the respective  
first electronic devices.

18. (currently amended) A method for tracking individuals  
divided into one or more flocks, comprising: ~~characterized in~~  
~~to provide~~ providing at least one individual flock leader in  
each flock, ~~called the flock leader,~~ with a first electronic  
device ~~(1)~~, said first electronic device ~~(1)~~ including a  
position tracker ~~(2)~~, a first transceiver ~~(3)~~ operating in a  
public radio communication network, and a second transceiver  
~~(4)~~ operating in a short distance radio system, ~~to provide and~~  
providing at least one other individual belonging to  
a flock with a second electronic device ~~(6)~~, said second  
electronic device ~~(6)~~ including a third transceiver ~~(7)~~ also  
operating in the short distance radio system, to transmit from  
each second electronic device ~~(6)~~ at least an identification  
code uniquely identifying said second electronic device ~~(6)~~ to  
said first electronic device ~~(1)~~ present in the flock through  
the short distance radio system, thereby indicating the  
presence of the associated individual in a flock.

19. (currently amended) A method as claimed in claim ~~19~~, ~~characterized in to communicate~~ 18 further comprising communicating from said first electronic device ~~(1)~~ present in each flock with a system controller through the public radio communication network, said system controller managing the system and storing system information and information regarding all registered individuals of the system including at least the identity of each individual, to which flock each individual currently belongs, an indication of which individuals being the flock leader(s) of each flock and a public radio communication network address of all the flock leader(s) of the system.

20. (currently amended) A method as claimed in claim 18 ~~or 19~~, ~~characterized in to transmit~~ further comprising transmitting periodically at least an identification code uniquely identifying the respective individuals to the first electronic device worn by flock leader(s) of the flock.

21. (currently amended) A method as claimed in claim 18 ~~, 19 or 20~~, ~~characterized in that~~ wherein the first electronic device ~~(1)~~ is storing at least the identities of the individuals currently associated with the corresponding flock.

22. (currently amended) A method as claimed in ~~any of the preceding claims~~, ~~characterized in that~~ claim 18 wherein each second electronic device ~~(6)~~ is sensing data regarding the condition of each individual, transmitting said data to the associated first electronic device ~~(1)~~, whereupon the data is stored in a memory in said first electronic device.

23. (currently amended) A method as claimed in ~~one of the claims 19 - 22, characterized in that~~ claim 19 wherein when an individual roams from a first flock to a second flock, the system controller is updated so that the information regarding the flock belonging of the individual is changed from the first flock to the second flock.

24. (currently amended) A method as claimed in ~~one of the claims 19 - 23, characterized in that~~ claim 19 wherein an alarm is activated for an individual when a predefined time period since last reception of data from the individual to the flock leader of the individual's associated flock has elapsed and no other flock leader of the system has received data from the individual within the same time period.

25. (currently amended) A method as claimed in claim 24 ~~characterized in that~~ wherein the alarm initiates sending of an e-mail or a short message to a person responsible for the individual for which the alarm is activated.
